

Volvo Car U.S. LLC: Statement on Hardware

Hardware: Volvo requires that hardware (e.g, screws, bolts, nuts, rivets) that has been damaged, worn or deformed as a result of a collision must be replaced with Genuine Volvo Car replacement parts to help ensure safety.

Use of aftermarket, damaged, or deformed hardware in a repair cannot be guaranteed and therefore should never be used. All collision repair guides have been designed around the use of genuine Volvo Car Replacement Parts. Volvo Car cannot ensure a safe repair utilizing anything other than Genuine Volvo Car Replacement Parts.

Third party or non-Volvo components may lead to system or component errors which can have an adverse effect on collision avoidance systems & occupant safety.

Using only genuine Volvo parts will help ensure vehicle safety, performance and residual value.

Volvo genuine parts are designed and manufactured to exacting specifications to help maximize safety, performance and reliability.

All Volvo exterior paneling, glass, unibody components, drivetrain, electronics, suspension SRS and steering components are essential to safe control of the vehicle. These parts are designed to work with other vehicle components to help keep occupants safe in an accident.

In the event of a collision, Volvo Car USA recommends that all repairs are performed by a Volvo Certified Technician through a Volvo Certified Collision Center using only genuine Volvo Car parts.

Always refer to Volvo Information and Diagnostics for Aftersales (VIDA) for the latest technical guidelines.
